

Class 3
Spring 2018

LS LOWRY

Mrs Byrne, TA support Mrs Pierson, Mrs Barnby, Miss Collins teaching Music.

Geography and Art. We will be studying the work of artist LS Lowry. They will respond to work using mixed media and collage. As Lowry's work featured industrial landscapes of Northern UK cities, we will link this work to a study of cities and will compare Manchester to Exeter. The children will have the chance to complete Geographical field studies and will compare urban and rural environments.

English. The term will start with work on Biographies. Children will read examples of Biographies about Sports Personalities and about LS Lowry. They will write their own Biography based upon research about Lowry. In the second part of term, children will look at the historical text 'Beowulf' and will make links to work in History. Children will continue to develop their use of grammar terms when discussing texts they have read and when composing and editing their own writing.

History. In the second part of the term pupils will think about Anglo-Saxons and their impact upon Britain today. They will make links to work on 'The Romans In Britain' completed in the Autumn term.

Maths. Children will continue to follow the Primary Curriculum for Mathematics. They will have regular chances to complete investigational work where they will be expected to draw on a range of mathematical knowledge and skills. Children will develop mental Maths skills and will be taught more formal written methods (such as column addition) at stages appropriate to their individual abilities.

RE. We will be following a unit called 'Religion and the Individual' which touches upon Christianity, Judaism, Sikhism, Islam and Buddhism.

Computing. Children will develop Digital Literacy by learning about effective searches; thinking about trustworthy sources and having specific sessions about safe internet use. They will use the internet to search for information to support their Biography work in English and will use software such as Publisher and Power-point to present information.

Science. The children will learn about Electricity in the first part of term and will develop their investigation skills; thinking about fair testing.

DT. Pupils will design and create structures as they work towards making their own model of a Saxon round house.

PE. Children will develop strength, flexibility and balance in Gymnastics. They will learn about team work, defending and attacking strategies in Tag Rugby.

Music. Music sessions will be taught by Miss Collins. Pupils will be taught to read and use musical notation when playing percussion instruments. They will also develop recorder playing skills as part of an ensemble.
